

# **Developing Windows Azure and Web Services**

Number: 70-487 Passing Score: 700 Time Limit: 120 min File Version: 2.1

#### **General Exam**

#### **QUESTION 1**

You are building an ADO.NET Entity Framework application. You need to validate the conceptual schema definition language (CSDL), store schema definition language (SSDL), and mapping specification language (MSL) files. Which Entity Data Model tool can you use? (Each correct answer presents a complete solution.

Choose all that apply.)

- A. EDM Generator (EdmGen.exe)
- B. ADO.NET Entity Data Model Designer
- C. Entity Data Model Wizard
- D. Update Model Wizard

Correct Answer: AB Section: (none) Explanation

## Explanation/Reference:

EdmGen.exe (http://msdn.microsoft.com/en-us/library/cc716721.aspx)
ADO.Net Entity Data Model Designer (http://msdn.microsoft.com/en-us/library/vstudio/cc716685(v=vs.100).aspx)

The Entity Data Model wizard creates the .edmx files. It does not validate the CSDL, SSDL or MSL files.

The Update Model wizard updates the .edmx file after changes have been made. It does not validate the CSDL, SSDL or MSL files.

#### **QUESTION 2**

**DRAG DROP** 

You are developing an ASP.NET Web API action method.

The action method must return the following JSON in the message body.

{ "Name ": "Fabrikam", "Vendor Id": 9823, "Items": ["Apples", "Oranges"] }

You need to return an anonymous object that is serialized to JSON.

What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

```
.....
                                               Answer Area
 "Fabrikam", VendorNumber = 9823,
                                             public object Get()
 "Fabrikam", VendorNumber = "9823",
 new List<string> { "Apples", "Oranges" }
                                                      Name =
 new List<string> { "Apples, Oranges" }
                                                      Items =
 return new List<string>
                                                 };
 return new
   "Fabrikam", VendorNumber = 9823,
                                              new List<string> { "Apples", "Oranges"
   return new
   new List<string> { "Apples", "Oranges" }
                                                  List<string> { "Apples", "Oranges"
                                         VCE To PDF - Free Practice Exam
   return new List<string>
C.
                                               "Fabrikam", VendorNumber = 9823,
   return new
   new List<string> { "Apples", "Oranges" }
                                              new List<string> { "Apples, Oranges" }
   "Fabrikam", VendorNumber = "9823",
   new List<string> { "Apples", "Oranges" }
```

Correct Answer: C Section: (none) Explanation

**Explanation/Reference:** 

```
public object Get()
{
    return new
{
        Name = "Fabrikam", VendorNumber = 9823,

        Items = new List<string> { "Apples", "Oranges" }
};
}
```

#### **QUESTION 3**

You are designing an ASP.NET Web API application. You need to select an HTTP verb to allow blog administrators to moderate a comment. Which HTTP verb should you use?

- A. GET
- B. POST
- C. DELETE
- D. PUT

Correct Answer: D Section: (none) Explanation

**Explanation/Reference:** 

# **QUESTION 4**

DRAG DROP

You are developing an ASP.NET Web API application that will be consumed by a web browser via a composite application that is served from another web domain. You need to configure the Web API. What should you do? (To answer, drag the appropriate XML elements to the correct location or locations in the answer area. Each XML element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

		***************************************	
		Answer Area	
-30	ccess-Control-Allow-Origin	<pre><httpprotocol></httpprotocol></pre>	Allow-Origin"

C.	*	Access-Control-Request-Headers	Access-Control-Request-Method
	Content-Type		
D.	*	Access-Control-Allow-Headers	Access-Control-Allow-Methods

Content-Type

Correct Answer: A Section: (none) Explanation

## **Explanation/Reference:**

#### **QUESTION 5**

You are developing an ASP.NET MVC web application that contains the following HTML.

You also have an ASP.NET Web API application that contains a call for retrieving customers. You must send and retrieve the data in the most compact format possible. You need to update the HTML for the customers table to contain data from the Web API application. Which script segment should you use?

```
CA. <script>
        $(function () {
          var $customers = $("#customers");
          S.ajax({
            url: "api/customers",
            dataType: "json",
            success: function (data) {
          1);
        1):
      </script>
CB. <script>
        $ (function () {
          var $customers = $("#customers")
          S.xml({
            url: "api/customers",
                                     VCE To PDF - Free Practice Exam
            dataType: "ajax",
             success: function (data) {
          1);
        1);
      </script>
CC. <script>
        $(function () {
          var $customers = $("#customers");
          $. ison ({
            url: "api/customers",
            dataType: "ajax",
            success: function (data) {
          1):
```

</script>

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: A Section: (none) Explanation

**Explanation/Reference:** 

**QUESTION 6**DRAG DROP

You are developing an ASP.NET MVC Web API application. The method names of the Web API must match naming guidelines for RESTful services. You need to create methods to support standard insert, select, update, and delete operations in an HTTP service. What should you do? (To answer, drag the appropriate HTTP methods to the correct row in the table in the answer area. Each HTTP method may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

VCE To PDF - Free Practice Exam

	Answer Area		
POST	Action	HTTP method	Relative URI
DELETE	Retrieve a list of all customers		/api/customers
READ UPDATE	Retrieve a customer by id		/api/customers/id
ADD	Retrieve a customer by category		/api/customer/?category=category
	Create a new customer	VCE To PDF	/api/customers
	Update a customer		/api/customers/id
	Remove a customer		/api/customers/id

A. GET, POST, PUT, PUT, POST, DELETE

B. GET, GET, GET, POST, PUT, DELETE

C. GET, GET, GET, ADD, INSERT, DELETE

 $\mathsf{D.}\ \mathsf{GET}, \mathsf{GET}, \mathsf{GET}, \mathsf{POST}, \mathsf{UPDATE}, \mathsf{DELETE}$ 

Correct Answer: B Section: (none) Explanation

# **Explanation/Reference:**

PUT is a correct answer, however if PUT is missing as an option, POST could also be valid if you consider "id" to be a parameter.

Action	HTTP method	Relative URI
Retrieve a list of all customers	GET	/api/customers
Retrieve a customer by id	GET	/api/customers/id
Retrieve a customer by category	GET	/api/customer/?category=category
Create a new customer	POST	/api/customersictice Exam
Update a customer	?? PUT ?	/api/customers/id
Remove a customer	DELETE	/api/customers/id

# **QUESTION 7**DRAG DROP

You are developing an ASP.NET MVC Web API image management application.

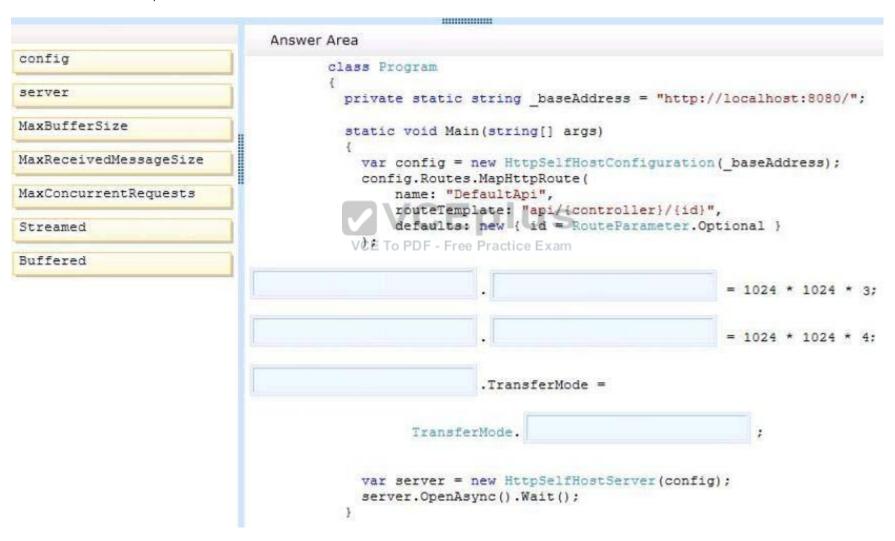

The application must meet the following requirements:

· It must send or receive image data without the use of a buffer.

- · It must allow up to 4 MB of image data to be received.
- · It must allow up to 3 MB of image data to be sent.

You need to complete the code to meet the requirements. What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Α.			Manager and	
	config		MaxBufferSize	
	config		MaxReceivedMessageSize	
	config		TransferMode	
	TransferMode.	Streamed		
B.	config		MaxBufferSize	
	config		MaxReceivedMessageSize	
	config		TransferMode	
	TransferMode.	Buffered		
C.	config		MaxBufferSize	
	config		MaxReceivedMessageSize	
	config		TransferMode VCEplus	
	TransferMode.	server	VCE To PDF - Free Practice Exam	
D.	config		MaxConcurrentRequests	
	config		MaxReceivedMessageSize	
	config		TransferMode	
	TransferMode.	Streamed		

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

```
class Program
          private static string baseAddress = "http://localhost:8080/";
          static void Main(string[] args)
            var config = new HttpSelfHostConfiguration( baseAddress);
            config.Routes.MapHttpRoute(
                name: "DefaultApi",
                routeTemplate: "api/{controller}/{id}",
                defaults: new { id = RouteParameter.Optional }
            );
config
                             MaxBufferSize
                                                         = 1024 * 1024 * 3;
                             MaxReceivedMessageSize
config
                                                         = 1024 * 1024 * 4:
config
                                        VCE To PDF - Free Practice Exam
                                 Streamed
                  TransferMode.
            var server = new HttpSelfHostServer(config);
            server.OpenAsync().Wait();
```

## **QUESTION 8**

You are planning to migrate websites from IIS 6 to IIS 7.5. You do not have access to SSH or a VPN. You need to select a deployment tool to securely migrate the websites. Which tool should you use?

- A. RoboCopy
- B. Web Deploy
- C. Microsoft command-line FTP
- D. xCopy

## Correct Answer: B

Section: (none) Explanation

## Explanation/Reference:

Loose reference to this being the correct answer: (http://www.iis.net/learn/publish/using-web-deploy/migrate-a-web-site-from-iis-60-to-iis-7-or-above)

#### **QUESTION 9**

You are developing an ASP.NET MVC application. Applications can be deployed to remote servers only by administrators who have elevated privileges. The administrators do not have access to Visual Studio 2012. You need to select a deployment tool to deploy the application to remote servers for testing. Which tool should you use?

- A. Copy Web Site Tool
- B. One-Click Publish
- C. Publish Web Site Tool
- D. Web Deployment Package

Correct Answer: D Section: (none) Explanation

**Explanation/Reference:** 

#### **QUESTION 10**

You are preparing to develop a set of libraries for a company. The libraries must be shared across the company. You need to create a remote NuGet feed that exposes the libraries. What should you do? (Each answer presents part of the solution. Choose all that apply.)

- A. Install the NuGet.Feed Package.
- B. Install the NuGet.Server Package.
- C. Configure the Packages folder located in the system.webserver section of the web application's Web.config.
- D. Create a new Empty Web Site in Visual Studio 2012.
- E. Configure the Packages folder located in the appSettings section of the web application's Web.config.
- F. Add packages to the Packages folder.
- G. Create a new Empty Web Application in Visual Studio 2012.

**Correct Answer: BEFG** 

Section: (none) Explanation

Explanation/Reference:

## **QUESTION 11**

You develop an ASP.NET MVC application that is secured by using SSL. You are ready to deploy the application to production. The deployment package must include the installation of the SSL certificate. You need to configure the deployment package to meet the requirement. What should you do?

- A. Create a web publish pipeline target file with a custom web deploy target.
- B. In the Package/Publish settings of the project, select the All Files in this project option.
- C. Extend the CopyAllFilesToSingleFolder target in the project file.
- D. In the Build Events settings of the project, configure a pre-build event to include the SSL certificate.

Correct Answer: A Section: (none) Explanation

## **Explanation/Reference:**

#### **QUESTION 12**

You are developing a library to support multiple ASP.NET MVC web applications on a shared server. The library provides implementations of security algorithms. If a problem with any of the security algorithms is discovered, a new version of the library must be created and deployed. Application downtime during the update must be minimized. You need to ensure that the new version of the library will be used by all applications as soon as possible. What should you do?

- A. Build the web applications and include the security assembly as an embedded resource. When an update is needed, copy the new assembly to the bin directory for the application.
- B. Sign all assemblies in each application with the same key used to sign the security assembly. When an update is needed, create a new key pair and re-sign all assemblies.
- C. Build the security assembly as a netmodule in a shared location.

  Use the assembly linker to merge the netmodule into the assemblies for the application.

  When an update is needed, update the netmodule in the shared location.
- D. Install the security assembly in the Global Assembly Cache (GAC). When an update is needed, update the assembly in the GAC.

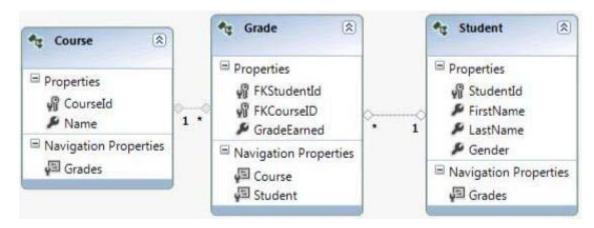

Correct Answer: D Section: (none) Explanation

# Explanation/Reference:

#### **QUESTION 13**

You are developing an application in Visual Studio 2012 to display student information. The application contains the following Entity Framework model.

The application contains a WCF data service named DirectoryService.svc. You need to create a query expression to display all of the grades for students whose first name is "John" How should you build the expression?

- A. http://localhost:54946/DirectoryService.svc/Students?\$filter=FirstName eq 'John' &\$expand=Grades
- B. http://localhost:54946/DirectoryService.svc/Students?\$filter=FirstName eq 'John'/Grades
- C. http://localhost:54946/DirectoryService.svc/Students?\$filter=FirstName = 'John' &\$expand=Grades
- D. http://localhost:54946/DirectoryService.svc/Grades/Students?\$filter=FirstName eq 'John'

Correct Answer: A Section: (none) Explanation

# **Explanation/Reference:**

## QUESTION 14 DRAG DROP

You are developing a WCF Data Services service in Visual Studio 2012 to display movie information from a SQL Server database that changes every 24 hours. The service is defined in the following class.

```
public class MovieService : DataService<MovieEntities>
{
   public static void InitializeService(DataServiceConfiguration config)
   {
      config.SetEntitySetAccessRule("Movies", EntitySetRights.AllRead);
      config.DataServiceBehavior.MaxProtocolVersion = DataServiceProtocolVersion.V2;
   }
}
```

The application contains the following Entity Framework model.

The service must only return data for movies that are currently in theaters. You need to add a method to the MovieService class to filter the data. How should you build the method? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Correct Answer: B Section: (none) Explanation

# **Explanation/Reference:**

```
public class MovieService : DataService < MovieEntities >
  public static void InitializeService(DataServiceConfiguration config)
    config.SetEntitySetAccessRule("Movies", EntitySetRights.AllRead);
    config.DataServiceBehavior.MaxProtocolVersion =
     DataServiceProtocolVersion. V2:
                               VCEplus
                                VCE To PDF - Free Practice Exam
                       "Movies"
    QuervInterceptor
                         <Func<Movie, bool>> ApplyTheaterFilter()
  public Expression
    return movie => movie.IsInTheaters == true;
```

#### **QUESTION 15**

You are developing an ASP.NET MVC application that reads and writes data from a SQL Server database. You need to prevent the application from reading data that is locked by other transactions. You also need to prevent exclusive range locks. Which isolation level should you use?

- A. ReadCommitted
- B. Serializable
- C. Repeatable

## D. ReadUncommitted

Correct Answer: A Section: (none) Explanation

## **Explanation/Reference:**

SQL Server Isolation Levels (http://msdn.microsoft.com/en-us/library/ms189122(v=sql.105).aspx) (http://msdn.microsoft.com/en-us/library/ms173763.aspx)

#### **QUESTION 16**

DRAG DROP

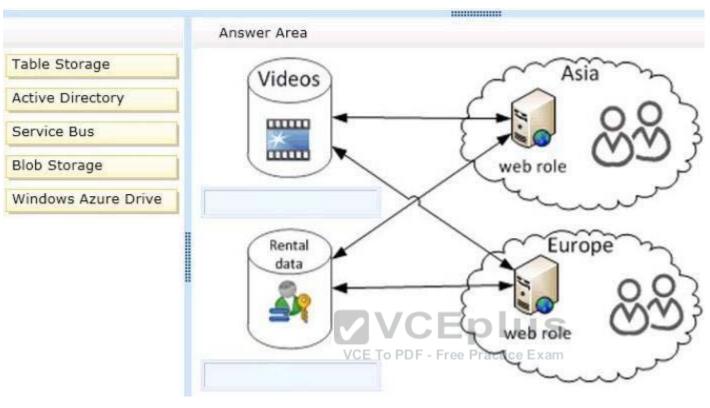

You are developing a Windows Azure based web application that provides users the ability to rent training videos. The application is deployed to hosted services in Asia and Europe.

The web application must meet the following requirements:

- · Video files are large and must be able to be streamed.
- Streaming videos requires low latency network connections.
- · Rental data contains structured information about the user and the video.
- · Rental permissions are checked every five seconds during video playback.

You need to recommend storage architecture for the application. What should you do? (To answer, drag the appropriate technologies to the correct location or locations in the answer area. Each technology may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

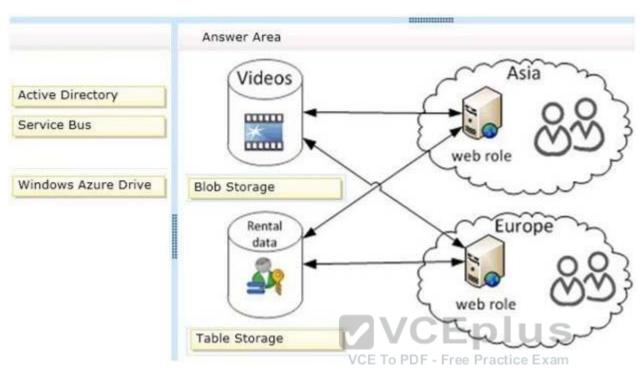

A.	Windows Azure Drive	Table Storage
B.	Blob Storage	Service Bus
C.	Blob Storage	Table Storage

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

# **QUESTION 17** DRAG DROP

You are developing a self-hosted WCF service that returns stock market information. The service must be discoverable by any client application. You need to build the service host. How should you build the host? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Answer Area								
UdpDiscoveryEndpoint static void Main(string[] args) {								
DiscoveryEndpoint Uri StockURI = new Uri("http://localhost:8733/StockTick var mytype = typeof(StockTickerService);			tockTicker");					
S	erviceBehaviorAttribute							
S	erviceDiscoveryBehavior	using ( host						
S	erviceHost	= new (mytype, StockURI						
		ť.						
		host.Description.E VCE To PDF - Fre host.AddServiceEnd host.Open(); Console.ReadLine() host.Close();	Sehaviors.Add(new ee Practice Exam	());	());			
A.	ServiceHost	Same as Balancian State of house	ServiceDiscoveryBehavior	DiscoveryEndpoint				
	Servicenost-	ServiceBehaviorAttribute						
B.	ServiceHost	ServiceHost	ServiceDiscoveryBehavior	DiscoveryEndpoint				
C.	ServiceHost	ServiceHost	ServiceBehaviorAttribute	DiscoveryEndpoint				
D.	ServiceHost	ServiceHost	ServiceBehaviorAttribute	UdpDiscoveryEndpoint				

Correct Answer: B Section: (none) Explanation

# **Explanation/Reference:**

```
static void Main(string[] args)
    Uri StockURI = new Uri("http://localhost:8733/StockTicker");
   var mytype = typeof(StockTickerService);
               ServiceHost
    using
                                              host
                 ServiceHost
                                                 (mytype, StockURI))
        host.AddServiceEndpoint(typeof(IStockTackerSer
            new WSHttpBinding(), "");
                                          VCE To PDF - Free Practice Exam
                                               ServiceDiscoveryBehavior
        host.Description.Behaviors.Add(new
                                                                                ());
                                        DiscoveryEndpoint
        host.AddServiceEndpoint (new
                                                                         ());
        host.Open();
        Console.ReadLine();
        host.Close();
```

#### **QUESTION 18**

You are developing a WCF service that compares several data sources. The service takes a long time to complete. The service must meet the following requirements:

· The client must be able to continue processing while the service is running.

· The service must initiate communication with the client application when processing is complete.

You need to choose a message pattern to meet the requirements. Which message pattern should you choose?

- A. One Way
- B. Streaming
- C. Duplex
- D. Request/Reply

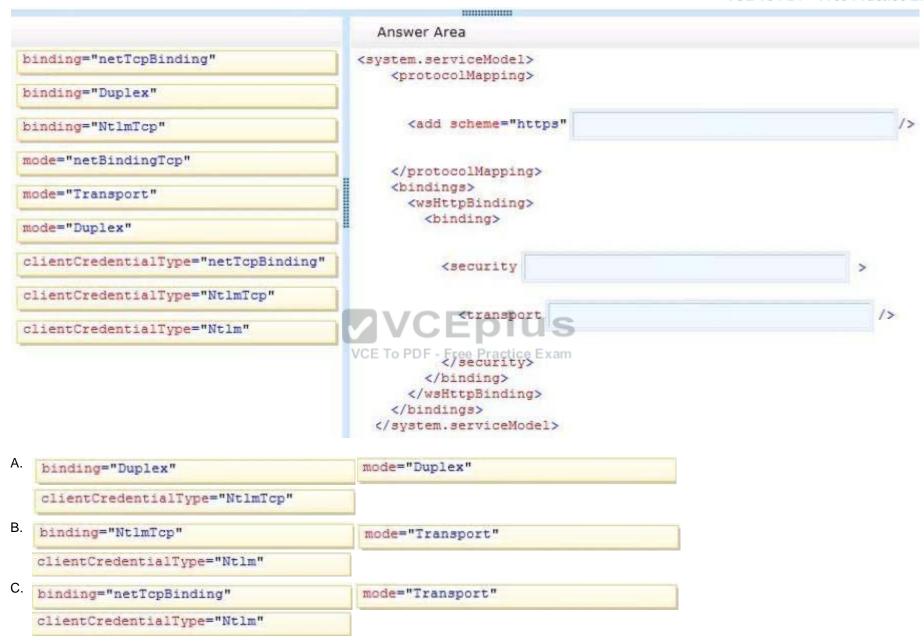

Correct Answer: C Section: (none) Explanation

**Explanation/Reference:** 

## QUESTION 19 DRAG DROP

You are developing a WCF service. You need to implement transport security by using NTLM authentication and NetTcpBindings. Which configuration values should you use? (To answer, drag the appropriate configuration values to the correct location or locations in the answer area. Each configuration value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Correct Answer: C Section: (none) Explanation

# **Explanation/Reference:**

```
<system.serviceModel>
    cprotocolMapping>
                              binding="netTcpBinding"
      <add scheme="https"
    </protocolMapping>
    <br/>
<br/>
dings>
      <wsHttpBinding>
        <br/>
<br/>
dinding>
                      mode="Transport"
           <security
                         clientCredentialType="Ntlm" Free Practic
             <transport
           </security>
        </binding>
      </wshttpBinding>
    </bindings>
  </system.serviceModel>
```

#### **QUESTION 20**

You are developing a WCF service. A new service instance must be created for each client session. You need to choose an instancing mode. Which instance mode should you use?

- A. PerCall
- B. Single
- C. Multiple
- D. PerSession
- E. PerRequest

Correct Answer: D Section: (none) Explanation

## Explanation/Reference:

WCF Instancing Modes (http://msdn.microsoft.com/en-us/library/ms731193.aspx)

# **QUESTION 21**

**DRAG DROP** 

You are developing a WCF service. The service will stream messages to clients on the internal network. You must use Windows Authentication, and all messages must be binary encoded. You need to configure the service. What should you do? (To answer, drag the appropriate elements to the correct location or locations in the answer area. Each element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

A. netTcpBinding mode="Ignore" netTcpBinding

B. netTcpBinding mode="Transport" netTcpBinding

C. netTcpBinding mode="Direct" netTcpBinding

D. httpBasicBinding mode="Direct" httpBasicBinding

Correct Answer: B Section: (none) Explanation

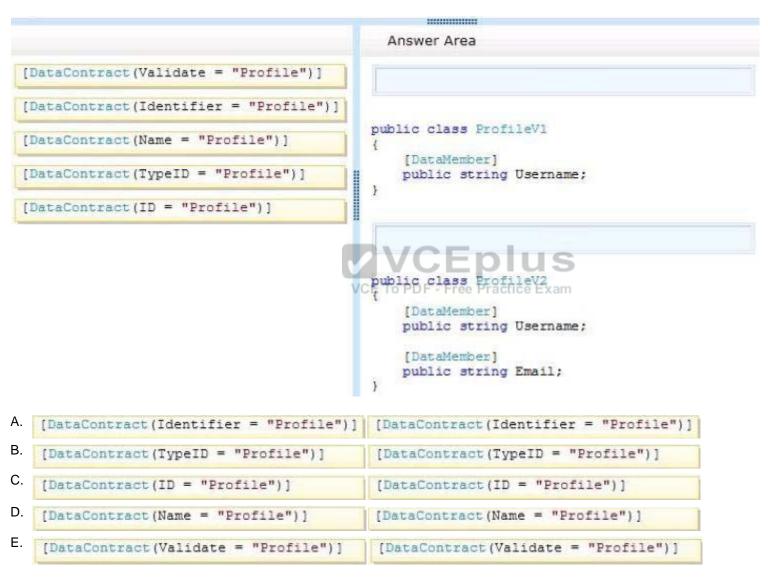

# **Explanation/Reference:**

**QUESTION 22** DRAG DROP

You are developing a WCF service. The WCF service requires implementations of the new data contracts to validate against the old schema. You need to develop a new data contract without breaking current functionality. What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Correct Answer: D Section: (none) Explanation

# **Explanation/Reference:**

#### **QUESTION 23**

You are developing a WCF service. A new service instance must be created for each client request. You need to choose an instancing mode. Which instancing mode should you use?

- A. Single
- B. PerRequest
- C. PerCall
- D. Multiple
- E. PerSession

Correct Answer: C Section: (none) Explanation

# **Explanation/Reference:**

WCF Instancing Modes (http://msdn.microsoft.com/en-us/library/ms731193.aspx)

## **QUESTION 24**

**DRAG DROP** 

You are creating a WCF service. The service endpoints must be exposed to the Windows Azure Service Bus. The service bus has a namespace named RestaurantSB. The key provider is "owner". You need to modify the web.config file to expose the endpoints. How should you modify the file? (To answer, drag the appropriate attributes to the correct location or locations in the answer area. Each attribute may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

		Answer Area				
j	ssuerName	<pre><services>   <service name="RestaurantService.MenuService"></service></services></pre>				
C	Contract					
1	ssuerKey	<endpoint< th=""><th>t</th><th>="RestaurantService.IMenuService"</th></endpoint<>	t	="RestaurantService.IMenuService"

         </binding>
      </wshttpBinding>
    </bindings>
  </system.serviceModel>
```

# **QUESTION 26**

DRAG DROP

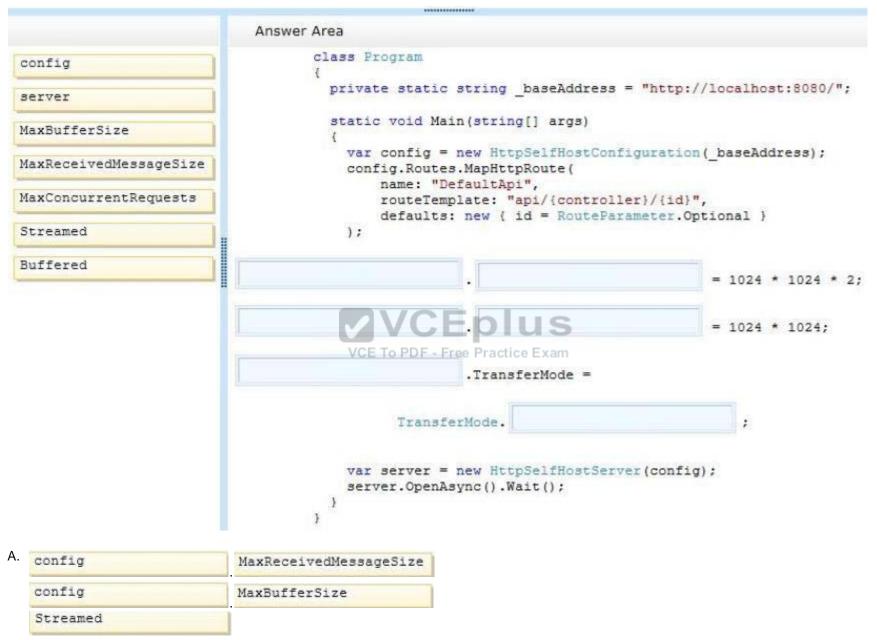

You are developing an ASP.NET MVC Web API application. The application must meet the following requirements:

- · It must send or receive data without the use of a buffer.
- · It must allow up to 1 MB of data to be received.
- · It must allow up to 2 MB of data to be sent.

You need to complete the code to meet the requirements. What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

B. config MaxBufferSize config MaxReceivedMessageSize Streamed config MaxBufferSize config MaxConcurrentRequests Streamed D. config MaxReceivedMessageSize config MaxBufferSize Buffered

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

```
class Program
          private static string baseAddress = "http://localhost:8080/";
          static void Main(string[] args)
           var config = new HttpSelfHostConfiguration( baseAddress);
            config.Routes.MapHttpRoute(
                name: "DefaultApi",
                routeTemplate: "api/{controller}/{id}",
                defaults: new { id = RouteParameter.Optional }
            );
config
                             MaxBufferSize
                                                          1024 * 1024 * 2:
config
                             MaxReceivedMessageSize
config
                                        VCE To PDF - Free Practice Exam
                                 Streamed
                  TransferMode.
            var server = new HttpSelfHostServer(config);
            server.OpenAsync().Wait();
```

# **QUESTION 27** DRAG DROP

You are developing an ASP.NET Web API action method.

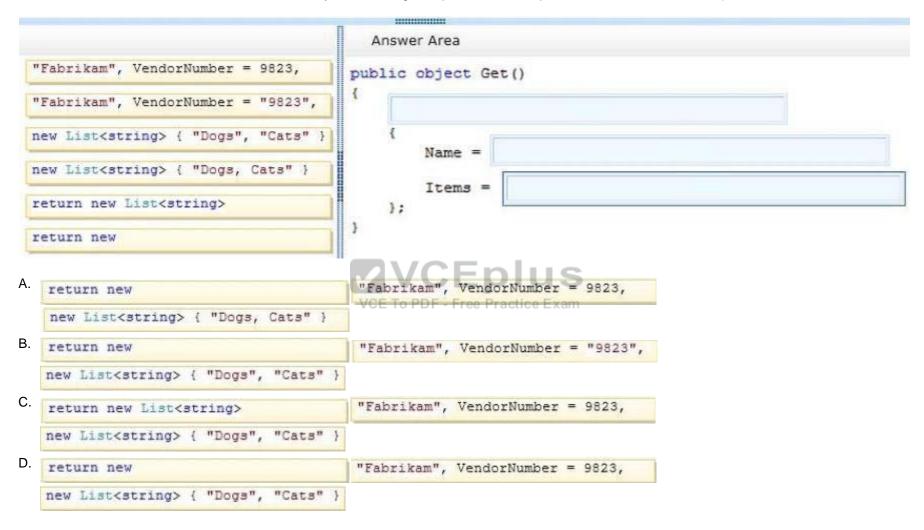

The action method must return the following JSON in the message body.

 ${\rm ``Name'': "Fabrikam'', "VendorId" :9823, Items'': ["Dogs", "Cats") > }$ 

You need to return an anonymous object that is serialized to JSON.

What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Correct Answer: D Section: (none) Explanation

## Explanation/Reference:

```
public object Get()
{
    return new
    {
        Name = "Fabrikam", VendorNumer = 9823,
        Items = new List<string> { "Dogs", "Cats" }
    };
}
```

#### **QUESTION 28**

You are designing an ASP.NET Web API application. You need to select an HTTP verb to allow blog administrators to remove a comment. Which HTTP verb should you use?

- A. PUT
- B. DELETE
- C. POST
- D. GET

Correct Answer: B Section: (none) Explanation

## Explanation/Reference:

## **QUESTION 29**

DRAG DROP

You are developing an ASP.NET Web API application for currency conversion that will be consumed by a web browser by using a composite application that is served from another web domain. You need to configure the Web API. What should you do? (To answer, drag the appropriate XML elements to the correct location or locations in the answer area. Each XML element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

#### **QUESTION 30**

You are developing an ASP.NET MVC application. The application is an order processing system that uses the ADO.NET Entity Framework against a SQL Server database. It has a controller that loads a page that displays all orders along with customer information. Lazy loading has been disabled. The Order class is shown below.

```
public string CustomerID { get; set; }
   public virtual Customer Customer { get; set; }
You need to return the orders and customer information in a single round trip to the database. Which code segment should you use?
C A. public ActionResult Index()
         IQuervable<Order> orders = db.Orders;
         orders = orders.Include("Customer");
         return View(orders.ToList());
CB.
       public ActionResult Index()
         IQuervable < Order > orders = db. Orders. Include ("Order. Customer");
         return View(orders.ToList());
                                           VCE To PDF - Free Practice Exam
CC. public ActionResult Index()
         IQueryable<Order> orders = db.Orders;
         orders.Select(o => o.Customer).Load();
         return View(orders.ToList());
C D. public ActionResult Index()
         IQueryable<Order> orders = db.Orders;
         return View(orders.ToList());
A. Option A
```

public partial class Order

B. Option B

C. Option C

D. Option D

Correct Answer: A Section: (none) Explanation

## **Explanation/Reference:**

#### **QUESTION 31**

You are developing an ASP.NET MVC application that reads and writes data from a SQL Server database. You need to maintain data integrity in all situations that use transactions.

- A. ReadUncommitted
- B. Repeatable
- C. Serializable
- D. ReadCommitted

Correct Answer: C Section: (none) Explanation

## Explanation/Reference:

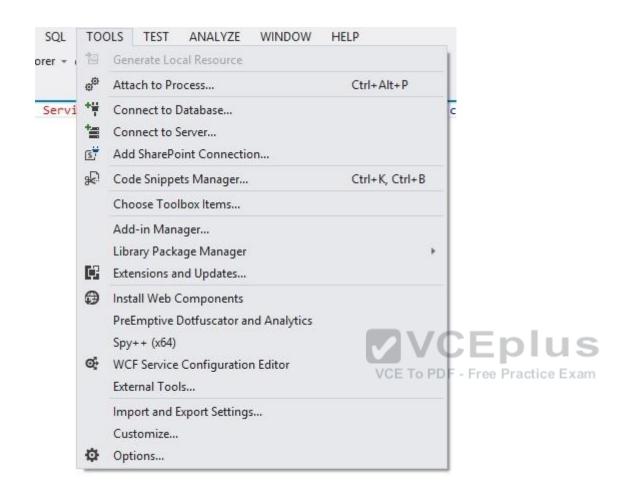

SQL Server Isolation Levels (http://msdn.microsoft.com/en-us/library/ms189122(v=sql.105).aspx) (http://msdn.microsoft.com/en-us/library/ms173763.aspx)

### **QUESTION 32**

**HOTSPOT** 

You are supporting an application that uses the ADO.NET Entity Framework to query and access data. The latest version of Entity Framework contains bug fixes that will improve performance. You need to update Entity Framework. Which Visual Studio 2012 menu item should you choose? (To answer, select the appropriate menu item in the answer area.)

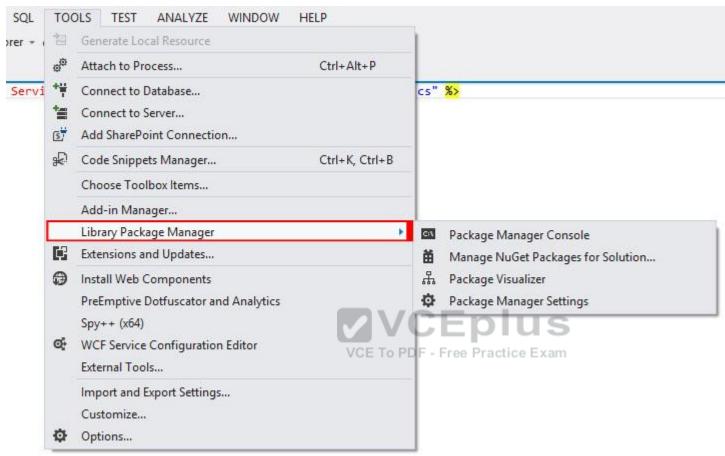

- A. Add-In Manager...
- B. Library Package Manager
- C. Extension Manager...
- D. External Tools...

Correct Answer: B Section: (none) Explanation

## **Explanation/Reference:**

#### **QUESTION 33**

You are developing an ASP.NET MVC application. Deployment administrators do not have access to Visual Studio 2102, but will have the elevated permissions required to deploy the application to the servers. You need to select a deployment tool for use by the deployment administrators. Which tool should you use?

- A. Publish Web Site Tool
- B. Web Deployment Package
- C. One-Click Publish
- D. Deployment Package Editor

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

#### Case 1

## **QUESTION 1**

Case Study: 1

Scenario 1

Background

You are developing a flight information consolidation service. The service retrieves flight information from a number of sources and combines them into a single data set. The consolidated flight information is stored in a SQL Server database. Customers can query and retrieve the data by using a REST API provided by the service. The service also offers access to historical flight information. The historical flight information can be filtered and queried in an ad hoc manner. The service runs on a Windows Azure Web Role. SSL is not used.

## **Business Requirements**

- · A new data source for historical flight information is being developed by a contractor located on another continent.
- · If a time zone is not specified, then it should be interpreted as Coordinated Universal Time (UTC).
- · When you upgrade a service from a staging deployment to a production deployment, the time that the service is unavailable must be minimized.
- · The default port must be used for HTTP.

VCE To PDF - Free Practice Exam

**Technical Requirements** 

The existing sources of flight information and the mechanism of exchange are listed below.

- · Blue Yonder Airlines provides flight information in an XML file.
- · Consolidated Messenger provides flight information in a Microsoft Access database that is uploaded every 12 hours to the service using SFTP. The company uses port 22 for SFTP.
- · Margie's Travel provides and consumes flight information using serialized ADO.NET DataSets. Data is periodically synced between the service and Margie's Travel.
- Trey Research provides data from multiple sources serialized in proprietary binary formats. The data must be read by using .NET assemblies provided by Trey Research. The assemblies use a common set of dependencies. The current version of the Trey Research assemblies is 1.2.0.0. All assemblies provided by Trey Research are signed with a key pair contained in a file named Trey.snk, which Trey Research also supplies.
- · The application specification requires that any third-party assemblies must have strong names.

Application Structure

# FlightInfo.cs

```
public class FlightInfo
{
   string DataSource { get; set; }
   public string Airline { get; set; }
   public string Flight { get; set; }
   public DateTimeOffset Arrival { get; set; }
   public int Seats { get; set; }
   public bool WasLate { get; set; }
}
```

## BlueYonderLoader.cs

## HistoricalDataLoader.cs

```
public class HistoricalDataLoader
 public static IEnumerable<HistoricalFlightInfo> LoadHistoricalFlights()
    ...
  public void StreamHistoricalFlights (XmlWriter responseWriter, string airline)
  private XElement ConvertToHistoricalFlight (XElement flight)
    return new XElement ("Flight", flight);
  private string GetAirline (XElement flightName)
    return flightName.Value.Substring(0, 2);
  IEnumerable<XElement> RemoteDataStream()
    return XDocument.Load("").Elements();
```

## MargiesTravelSync.cs

```
public class MargiesTravelSync
{
   public void Sync()
   {
        ...
}

private DataSet LoadLocal()
{
      var dataSet = new DataSet();
      dataSet.ReadXml("local");
      return dataSet;
}

private StreamWriter SendStream()
{
   return new StreamWriter("SendStream");
}

private StreamReader ReceiveStream() VCE To PDF - Free Practice Exam
   {
   return new StreamReader("ReceiveStream");
}
```

## FlightInfoContext.cs

```
public class FlightInfoContext : DbContext
{
  public DbSet<FlightInfo> FlightInfo { get; set; }

  public override int SaveChanges()
  {
    return base.SaveChanges();
  }

  private bool IsTransient(int ex)
  {
    var errors = new[] { 10053, 10054, 64 };
    return errors.Contains(ex);
  }
}
FlightDataController.cs
```

A.

Correct Answer: A Section: (none) Explanation

**Explanation/Reference:** 

**QUESTION 2**DRAG DROP

You need to configure the Windows Azure service definition to enable Consolidated Messenger to upload files. What should you do? (To answer, drag the appropriate configuration items to the correct location or locations. Each configuration item may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

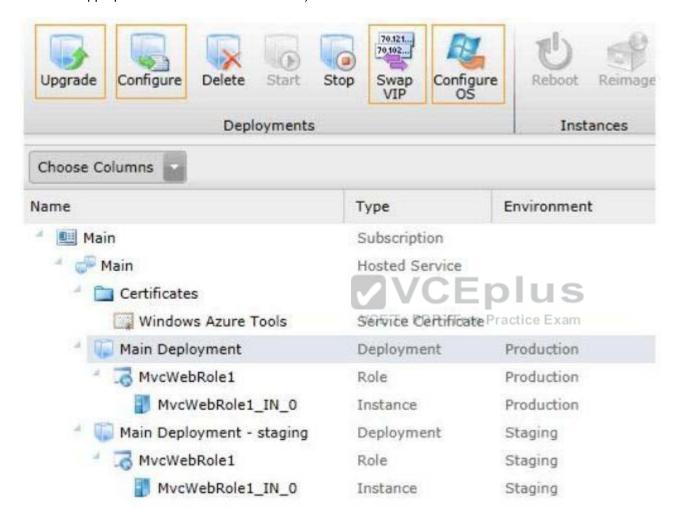

**QUESTION 3**HOTSPOT

You need to deploy the application to the Windows Azure production environment to meet the business requirements. What should you do? (To answer, select the appropriate button in the answer area.)

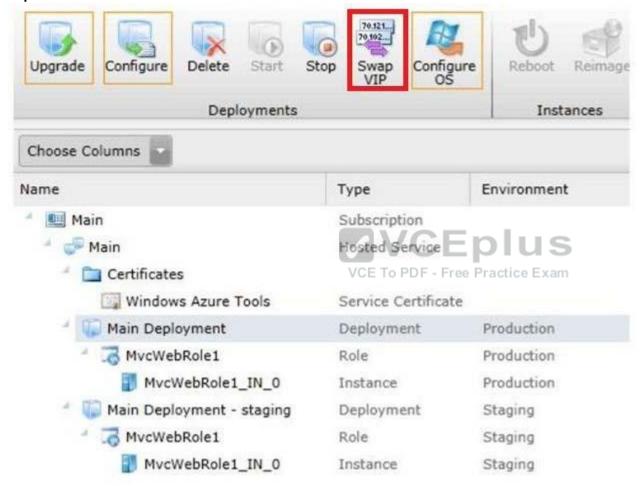

- A. Upgrade
- B. Configure
- C. Swap VIP
- D. Configure OS

Correct Answer: C Section: (none) Explanation

## **Explanation/Reference:**

#### **QUESTION 4**

You need to recommend a data access technology to the contractor to retrieve data from the new data source. Which data access technology should you recommend?

A. LINQ to XML

- B. ADO.NET Entity Framework
- C. ADO.NET DataSets
- D. WCF Data Services

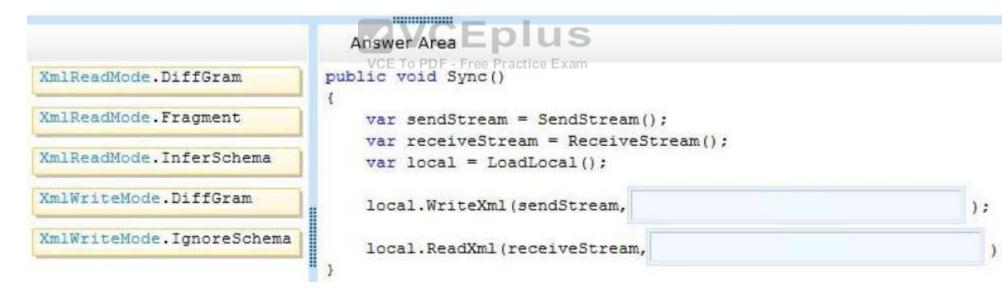

Correct Answer: D Section: (none) Explanation

## **Explanation/Reference:**

# **QUESTION 5**

DRAG DROP

Flight information data provided by Margie's Travel is updated both locally and remotely. When the data is synced, all changes need to be merged together without causing any data loss or corruption. You need to implement the Sync() method in the MargiesTravelSync.es file. What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

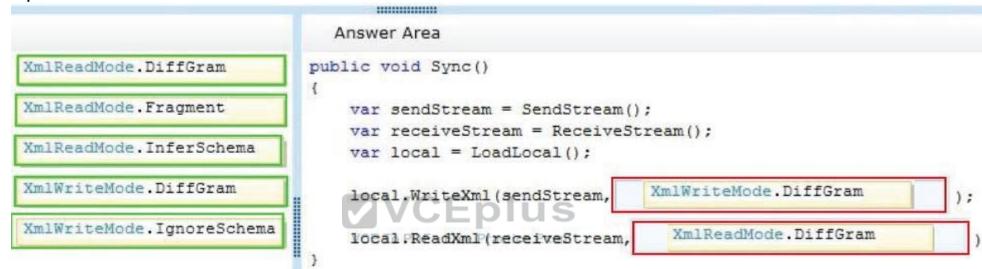

- A. XmlReadMode.DiffGram XmlWriteMode.DiffGram
- B. XmlWriteMode.DiffGram XmlReadMode.DiffGram
- C. XmlWriteMode.InferSchema XmlReadMode.InferSchema

D. XmlWriteMode.Fragment XmlReadMode.Fragment

Correct Answer: B Section: (none) Explanation

## **Explanation/Reference:**

# QUESTION 6 DRAG DROP

Historical flight information data will be stored in Windows Azure Table Storage using the FlightInfo class as the table entity. There are millions of entries in the table. Queries for historical flight information specify a set of airlines to search and whether the query should return only late flights. Results should be ordered by flight name. You need to specify which properties of the FlightInfo class should be used at the partition and row keys to ensure that query results are returned as quickly as possible. What should you do? (To answer, drag the appropriate properties to the correct location or locations in the answer area. Each property may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

- A. Airline
- B. WasLate
- C. Flight
- D. Arrival

Correct Answer: AC Section: (none) Explanation

## **Explanation/Reference:**

# QUESTION 7 DRAG DROP

The service has been deployed to Windows Azure. Trey Research has provided version 1.3.0.0 of the assembly to support a change in the serialization format. The service must remain available during the transition to the new serialization format. You need to ensure that the service is using the new

assembly. Which configuration setting should you add to the web.config? (To answer, drag the appropriate configuration elements to the correct location or locations in the answer area. Each configuration element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

#### **QUESTION 8**

Errors occasionally occur when saving data using the FlightInfoContext ADO.NET Entity Framework context. Updates to the data are being lost when an error occurs. You need to ensure that data is still saved when an error occurs by retrying the operation. No more than five retries should be performed. Which code segment should you use as the body of the SaveChanges() method in the FlightInfoContext.es file?

```
for (var i = 0; i < 5; i++)
        try
          return base. SaveChanges();
        catch (SqlException ex)
          if (IsTransient (ex.Number))
            continue;
      return base. SaveChanges();
CB. var exception = new EntitySqlException();
      while (exception.Data != 0 && exception.Data.Count < 5)
        try
                                         VCE To PDF - Free Practice Exam
          return base.SaveChanges();
        catch (EntitySqlException ex)
          if (IsTransient(ex.HResult))
            exception = ex;
      return base. SaveChanges();
```

```
CC. for (var i = 0; i < 5; i++)
        try
          return base.SaveChanges();
        catch (SqlException ex)
          if (IsTransient(ex.Number))
            break;
      return base.SaveChanges();
      for (var i = 0; i < 5; i++)
        try
                                       VCEplus
          return base. SaveChanges();
                                        VCE To PDF - Free Practice Exam
        catch (SqlException ex)
          if (!IsTransient(ex.Number))
            continue;
      return base. SaveChanges();
A. Option A
B. Option B
```

- C. Option C
- D. Option D

Correct Answer: A Section: (none)

### **Explanation**

## **Explanation/Reference:**

#### **QUESTION 9**

You are adding a new REST service endpoint to the FlightDataController controller. It returns flights from the consolidated data sources only for flights that are late. You need to write a LINQ to Entities query to extract the required data. Which code segment should you use?

```
C A. var historical = LoadHistorical();
      var query = Context.FlightInfo.AsQueryable()
       .Join(historical, x => x.Flight, y => y.Flight, (x, y) => new { Current = x,
      Historical = y })
       .Where(x => x.Historical.WasLate)
       .Select(x => x.Current);
CB. var historical = LoadHistorical();
      var query = Context.FlightInfo.AsEnumerable()
       .Where (x => historical.All(y => y.WasLate && x.Flight == y.Flight))
                              VCE To PDF - Free Practice Exam
       .Select(x => x);
C C. var historical = LoadHistorical():
      var query = Context.FlightInfo.AsQueryable()
       .Where (x => historical.Select(y => y.Flight).Contains(x.Flight))
       .Where(x => historical.Any(y => y.WasLate))
       .Select(x => x);
C D. var historical = LoadHistorical();
      var query = Context.FlightInfo.AsEnumerable()
       .Join(historical, x => x.Flight, y => y.Flight, (x, y) => new { Current = x,
      Historical = y })
       .Where(x => x.Historical.WasLate)
       .Select(x => x.Current);
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: D Section: (none) Explanation

## Explanation/Reference:

D is right because you send result as REST so if you use "AsQueryable" the result is deferred to the next enumeration of your result.

D is not optimized but will works.

A will break at runtime.

Credits to Rem

#### **QUESTION 10**

Data provided by Consolidated Messenger is cached in the HttpContext.Cache object. You need to ensure that the cache is correctly updated when new data arrives. What should you do?

- A. Ensure that the EffectivePrivateBytesLimit value is greater than the size of the database file.
- B. Change the sliding expiration of the cache item to 12 hours.
- C. Use the SqlCacheDependency type configured with a connection string to the database file.
- D. Use the CacheDependency type configured to monitor the SFTP target folder.

Correct Answer: D Section: (none) Explanation

## Explanation/Reference:

#### **QUESTION 11**

You need to load flight information provided by Consolidated Messenger. Which should you use?

- A. SQL Server Data Transformation Services (DTS)
- B. EntityTransaction and EntityCommand
- C. Office Open XML
- D. OleDbConnection and OleDbDataReader

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

## QUESTION 12 DRAG DROP

You need to parse flight information from Blue Yonder Airlines. The content of the XML file is shown below.

Some airlines do not specify the timezone of the arrival time. If the timezone is not specified, then it should be interpreted per the business requirements. You need to implement the LoadFlights() and Parse() methods of the BlueYonderLoader class. What should you do? (To answer, drag the appropriate code segments to the correct location in the answer area. Each segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

```
var flights = feed.Elements(
feed.Root.GetPrefixOfNamespace("(urn:CFI)") + "Flight");
var flights = feed.Descendants().Where(x =>
x.NodeType != XmlNodeType.XmlDeclaration && (string)x ==
"Flight");
var flights = feed.Descendants("{urn:CFI}Flight")
 .Concat (feed.Descendants ("Flight"));
fi.Arrival = DateTimeOffset.Parse(arrivalRaw,
null, System.Globalization.DateTimeStyles.AssumeUniversal);
fi.Arrival = DateTimeOffset.Parse(arrivalRaw,
null, System.Globalization.DateTimeStyles.AdjustToUniversal);
                                          VCF To PDF - Free Practice Exam
fi.Arrival = XmlConvert.ToDateTimeOffset(arrivalRaw,
new[] { "Local", "Universal" });
                                           .....
public IEnumerable<FlightInfo> LoadFlights(XDocument feed)
  return flights.Select(x => Parse(x));
private FlightInfo Parse (XElement flightElement)
  var fi = new FlightInfo();
  fi.Flight = flightElement.Attribute("name").Value;
  var arrivalRaw = flightElement.Element("Arrival").Value;
```

```
A. var flights = feed.Elements(
    feed.Root.GetPrefixOfNamespace("{urn:CFI}") + "Flight");
   fi.Arrival = DateTimeOffset.Parse(arrivalRaw,
    null, System.Globalization.DateTimeStyles.AssumeUniversal);
   var flights = feed.Descendants("{urn:CFI}Flight")
    .Concat (feed.Descendants ("Flight"));
   fi.Arrival = DateTimeOffset.Parse(arrivalRaw,
    null, System.Globalization.DateTimeStyles.AssumeUniversal);
   var flights = feed.Descendants("{urn:CFI}Flight")
    .Concat (feed.Descendants ("Flight"));
   fi.Arrival = XmlConvert.ToDateTimeOffset(arrivalRaw,
    new[] { "Local", "Universal" });
   var flights = feed.Descendants("{urn:CFI}Flight")
    .Concat (feed.Descendants ("Flight"));
   fi.Arrival = DateTimeOffset.Parse(arrivalRaw,
    null, System. Globalization. DateTimeStyles. AdjustToUniversa.
```

Correct Answer: B Section: (none) Explanation

**Explanation/Reference:** 

### **QUESTION 13**

You are adding a new REST service endpoint to the FlightDataController controller that returns the total number of seats for each airline. You need to write a LINQ to Entities query to extract the required data.

Which code segment should you use?

```
C A var query = from flight in Context.FlightInfo
       group flight by flight. Seats into agg
       let airline = agg.First()
       select new
         TotalSeats = agg.Kev.
        Airline = airline,
       1:
C B. var query = from flight1 in Context.FlightInfo
       from flight2 in Context.FlightInfo
       where flight1. Airline == flight2. Airline
       select new
         Airline = flight1.Airline,
         TotalSeats = Math.BigMul(flight1.Seats, flight2.Seats),
       1:
C C. var query = from flight in _Context.FlightInfo
      from airline in flight.Airline
       group airline by airline into agg/CE To PDF - Free Practice Exam
       select new
         Airline = agg.Key,
         TotalSeats = agg.Sum(x => Convert.ToInt32(x)),
       3 .
CD. var query = from flight in Context.FlightInfo
       group flight by flight. Airline into ago
       select new
         Airline = agg.Key,
         TotalSeats = agg.Sum(x => x.Seats),
       1:
A. Option A
B. Option B
```

C. Option C

D. Option D

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

### **QUESTION 14**

You need to load flight information provided by Consolidated Messenger. What should you use?

- A. Office Open XML
- B. COM interop
- C. OleDbConnection and OleDbDataReader
- D. EntityConnection and EntityDataReader

Correct Answer: C Section: (none) Explanation

### **QUESTION 15**

Historical flight information data will be stored in Windows Azure Table Storage using the FlightInfo class as the table entity. There are millions of entries in the table. Queries for historical flight information specify a set of airlines to search and whether the query should return only late flights. Results should be ordered by flight name. You need to specify which properties of the FlightInfo class should be used at the partition and row keys to ensure that query results are returned as quickly as possible. What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Use the WasLate property as the row key.
- B. Use the Airline property as the row key.
- C. Use the WasLate property as the partition key
- D. Use the Arrival property as the row key.
- E. Use the Airline property as the partition key.
- F. Use the Flight property as the row key.

Correct Answer: EF Section: (none) Explanation

## **Explanation/Reference:**

### **QUESTION 16**

Transformed historical flight information provided by the RemoteDataStream() method must be written to the response stream as a series of XML elements named Flight within a root element named Flights. Each Flight element has a child element named FlightName that contains the flight name that starts with the two-letter airline prefix. You need to implement the StreamHistoricalFlights() method so that it minimizes the amount of memory allocated. Which code segment should you use as the body of the StreamHistoricalFlights() method in the HistoricalDataLoader.cs file?

```
C A. responseWriter.WriteStartElement("Flights");
      var flights = RemoteDataStream()
       .OrderBy(x => GetAirline(x.Element("FlightName")));
      var filteredFlights = flights
       .SkipWhile(x => GetAirline(x.Element("FlightName")) != airline);
      foreach (var f in filteredFlights)
        var flight = ConvertToHistoricalFlight(f);
        flight.WriteTo(responseWriter);
      responseWriter.WriteEndElement();
C B. responseWriter.WriteStartElement("Flights");
      var flights = RemoteDataStream().Select(x =>
         if (GetAirline(x) == airline)
           return ConvertToHistoricalFlight(x);
                                            VCEplus
         return null:
       1):
                                        VCE To PDF - Free Practice Exam
      flights.TakeWhile(x =>
         x.WriteTo(responseWriter);
         return x != null;
       1):
      responseWriter.WriteEndElement();
C. var data = RemoteDataStream().ToDictionary(x =>
       GetAirline(x.Element("FlightName")),
       x => new XStreamingElement("Flights", ConvertToHistoricalFlight(x).Descendants()));
      data[airline].WriteTo(responseWriter);
C D. var flights = new XStreamingElement("Flights",
       from flight in RemoteDataStream()
       where GetAirline(flight.Element("FlightName")) == airline
       select ConvertToHistoricalFlight(flight));
      flights.WriteTo(responseWriter);
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: D Section: (none) Explanation

**Explanation/Reference:** 

### **QUESTION 17**

Errors occasionally occur when saving data using the FlightInfoContext ADO.NET Entity Framework context. Updates to the data are being lost when an error occurs. You need to ensure that data is still saved when an error occurs by retrying the operation. No more than five retries should be performed. With which code segment should you replace the body of the SaveChanges() method in the FlightInfoContext.cs file?

```
C A var result = FlightInfo.SqlQuery("UPDATE WITH RETRY", FlightInfo, "IsTransient", 5);
      if (result.Count() > 5)
        result.AsNoTracking();
        return -1;
      return 0;
CB. try
        return base. SaveChanges();
      catch (EntityCommandExecutionException ex)
        if (ex.Data.Keys.Cast<int>().Any(x => IsTransient(x)))
          return 5 & SaveChanges();
                                       ✓ VCEplus
        return -1;
C C. for (var i = 0; i < 5; i++)
                                       VCE To PDF - Free Practice Exam
        try
          return base. SaveChanges();
        catch (SqlException ex)
          if (IsTransient(ex.Number))
            continue;
      return base. SaveChanges();
C D. var exception = new EntitySqlException();
      while (exception.HResult != 0 && exception.Data.Count < 5)
        try
          return base. SaveChanges();
```

catch (EntitySqlException ex)

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: C Section: (none) Explanation

## **Explanation/Reference:**

EntitySqlException: Represents errors that occur when parsing Entity SQL command text. This exception is thrown when syntactic or semantic rules are violated.

SqlException: The exception that is thrown when SQL Server returns a warning or error. This class cannot be inherited.

EntityCommandExecutionException: Represents errors that occur when the underlying storage provider could not execute the specified command. This exception usually wraps a provider-specific exception.

### Case 2

### **QUESTION 1**

Case Study: 2

Scenario 2

Background

You are developing an ASP.NET MVC application in Visual Studio 2012 that will be used to process orders.

**Business Requirements** 

The application contains the following three pages.

- · A page that queries an external database for orders that are ready to be processed. The user can then process the order.
- A page to view processed orders.
- A page to view vendor information.

The application consumes three WCF services to retrieve external data.

VCE To PDF - Free Practice Exam

**Technical Requirements** 

Visual Studio Solution:

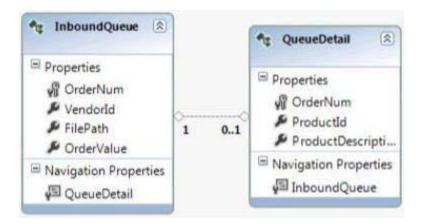

The solution contains the following four projects.

- ExternalQueue: A WCF service project used to communicate with the external order database.
- OrderProcessor: An ASP.NET MVC project used for order processing and logging order metadata.
- · OrderUpload: A WCF service project used to submit order data to an external data source.
- · Shipping: A WCF service project used to acquire shipping information.

ExternalQueue Project:

Entity Framework is used for data access. The entities are defined in the ExternalOrders.edmx file as shown in the following diagram.

The project contains two services defined in the following files.

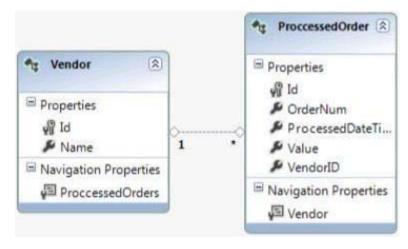

- · IExternalQueueService.cs
- · ExternalQueueService.svc.

The ExternalQueue. Helpers namespace contains a definition for a class named OrderNotFound Exception.

OrderProcessor Project:

VCE To PDF - Free Practice Exam

Entity Framework is used for data access. The entities are defined in the ProcessedOrders.edmx file as shown in the following diagram.

The classes are contained in the OrderProcessor. Entities namespace. The project contains the following two controllers.

- · InboundQueueController.cs
- ProcessedOrderController.cs

WCF service proxies to the ExternalQueue, Shipping and OrderUpload services have been generated by using the command prompt. The ExecuteCommandProcedure() method in the ExternalQueueService.svc file must run asynchronously.

The ProcessedOrderController controller has the following requirements.

The GetVendorPolicy() method must enforce a 10 minute absolute cache expiration policy.

The GetProcessedOrders() method must return a view of the 10 most recently processed orders.

OrderUpload Project:

The project contains two services defined in the following files.

- · IUploadCallbackService.cs
- · UploadCallbackService.svc

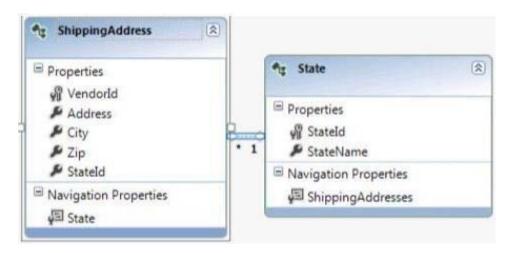

Data Access is maintained in a file named UploadOrder.es./CE To PDF - Free Practice Exam

Shipping Project:

Entity Framework is used for data access. The entities are defined in the ExternalOrders.edmx file as shown in the following diagram.

The Custom Tool property for ExternalOrders.edmx has been removed. POCO classes for the Entity Model are located in the ShippingAddress.cs file. The POCO entity must be loaded by using lazy loading. The project contains two services defined in the following files.

- · IShippingService.cs
- · ShippingService.svc.

The IShippingService contract must contain an operation that receives an order number as a parameter. The operation must return a class named ShippingInfo that inherits from a class named State.

## QUESTION 2 DRAG DROP

The GetVendorPolicy() private method in the ProcessedOrderController controller is returning a CacheltemPolicy object with default values. The returned policy must expire if the external file located at

C:\Triggers\VendorTrigger.txt has been modified or the timeout outlined in the technical requirements is reached. You need to return the policy. How should you build the method? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code

segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

	Answer Area

## **Explanation/Reference:**

### **QUESTION 3**

The GetExternalOrder() method in the ExternalQueueService service is throwing a runtime error. The method must query the database for a record that matches the orderNum parameter passed to the method.

You need to modify the queryString string to retrieve the record. With which code segment should you replace line EQ64?

- A string queryString = @"SELECT VALUE q FROM ExternalOrdersEntities.InboundQueues AS q WHERE q.OrderNum = @orderNum";

  C B. string queryString = @"SELECT VALUE \* FROM ExternalOrdersEntities.InboundQueues WHERE OrderNum = @orderNum";

  C C. string queryString = @"SELECT q.OrderNum, q.VendorId, q.FilePath, q.OrderValue FROM ExternalOrdersEntities AS q WHERE q.OrderNum = @orderNum";

  C D. string queryString = @"SELECT q FROM ExternalOrdersEntities.InboundQueues WHERE q.OrderNum = @orderNum";
- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Explanation/Reference:** 

# **QUESTION 4**DRAG DROP

You add a class named ShippingInfo. You need to modify the IShippingService interface and the ShippingInfo class to meet the technical requirements. What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

			111111111111111111111111111111111111111	
			Answer Area	
[1	DataMember]			
10	CollectionDataContract]	1-101	blic interface IShipp	ingService
[]	DataContract]	{

# **QUESTION 5**DRAG DROP

You need to create the ShippingContext class in the ShippingAddress.cs file to meet the requirements. What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

		Answer Area			
O	bjectSet	public class ShippingContext	: :		
0	bjectContext	{     public ShippingContext()			
0	bjectResult	: base("name=ShippingAdd:	ressEntities")		
L	azyLoadingEnabled = true;	(			
L	azyLoadingEnabled = false;	this.ContextOptions.	us		
	azyLoadingEnabled = false;	public VCE To PDF - Free Prac		<shippingaddress< th=""><th>&gt; ShippingAddresses</th></shippingaddress<>	> ShippingAddresses
		<pre>get { return CreateObject }</pre>	ctSet <shippingado< th=""><th>iress&gt;(); }</th><th></th></shippingado<>	iress>(); }	
		public		<state> States</state>	
		<pre>get { return CreateObject }</pre>	ctSet <state>(); }</state>		
		1			
A.	ObjectContext	LazyLoadingEnabled = false;	ObjectSet		
	ObjectSet				
B.	ObjectContext	LazyLoadingEnabled = true;	ObjectSet		

```
C. ObjectSet LazyLoadingEnabled = true; ObjectContext
ObjectContext

D. ObjectResult LazyLoadingEnabled = true; ObjectSet
ObjectSet
```

Correct Answer: B Section: (none) Explanation

## **QUESTION 6**

You need to modify the ExecuteCommandProcedure() method to meet the technical requirements. Which code segment should you use?

```
C A. private async Task ExecuteCommandProcedure(EntityCommand command)
       using (EntityConnection connection = new EntityConnection
      ("name=ExternalOrdersEntities"))
          command.Connection = connection;
          await connection.OpenAsync();
          await command. ExecuteNonQueryAsync();
C B. private void ExecuteCommandProcedure(EntityCommand command)
        using (EntityConnection connection = new EntityConnection
      ("name=ExternalOrdersEntities"))
          command.Connection = connection;
          command.ExecuteNonQueryAsync();
                                         2VCEplus
                                        VCE To PDF - Free Practice Exam
C. private void ExecuteCommandProcedure(EntityCommand command)
        using (EntityConnection connection = new EntityConnection
       ("name=ExternalOrdersEntities"))
          command.Connection = connection;
          connection.OpenAsync();
          command.ExecuteNonQueryAsync();
C D. private async Task ExecuteCommandProcedure(EntityCommand command)
        using (EntityConnection connection = new EntityConnection
       ("name=ExternalOrdersEntities"))
          command.Connection = connection;
          connection.OpenAsync();
          command.ExecuteNonQueryAsync();
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: A Section: (none) Explanation

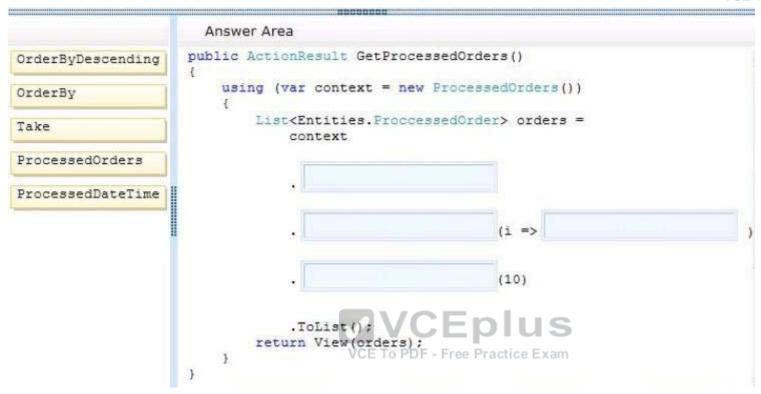

**Explanation/Reference:** 

**QUESTION 7**DRAG DROP

You need to complete the GetProcessedOrders() action in the ProcessedOrderController controller to meet the requirements. What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

- A. .ProcessedOrders.OrderBy (i => ProcessedDateTime).Take(10)
- $B. \ \ . ProcessedOrders. ProcessedDateTime \ (i \Rightarrow OrderByDescending). Take (10)$
- C. .ProcessedOrders.OrderByDescending (i => ProcessedDateTime).Take(10)
- D. .ProcessedOrders.Take (i => ProcessedDateTime).OrderByDescending(10)

Correct Answer: C Section: (none) Explanation

**Explanation/Reference:** 

# **QUESTION 8**DRAG DROP

The GetQueueItems() action in the InboundQueueController controller is not populating the view with data. The action must populate the view with data by calling the GetExternalOrders() method in the ExternalQueueService service using the ChannelFactory class. You need to modify the action to populate the view with data. What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

	Answer Area		
InboundQueue			
IExternalQueueService	ChannelFactory<		> qFactory =
BasicHttpBinding	new ChannelFactory<		> (
GetExternalOrders	new	0,	
CreateChannel	new EndpointAddress(		
	"http://localhost:62		rvice.svc"));
	IEnumerable<		inboundOrders =
	qService.GetExternal	lOrders();	
	return View(inboundO	rders);	
1ExternalQueueService	IExternalQueueService	InboundQueue	CreateChannel
BasicHttpBinding			<u> </u>
3 IExternalQueueService	IExternalQueueService	BasicHttpBinding	CreateChannel
InboundQueue			
C. IExternalQueueService	IExternalQueueService	BasicHttpBinding	GetExternalOrders
InboundQueue			

Correct Answer: B Section: (none) Explanation

## **Explanation/Reference:**

### **QUESTION 9**

The DeleteExternalOrder() method in the ExternalQueueService service is not throwing a FaultException exception as defined by the FaultContractAttribute attribute in the IExternalQueueService.cs file. You need to throw the FaultException exception. Which code segments can you insert at line EQ45 to achieve this goal? (Each correct answer presents a complete solution. Chose all that apply)

Explanation/Reference:

Correct Answer: BC Section: (none) Explanation

http://msdn.microsoft.com/en-us/library/ms586019.aspx

## **QUESTION 10**

DRAG DROP

The GetExternalOrders() method must use members of the EntityClient namespace to query the database for all records in the InboundQueue entity. You need to modify the GetExternalOrders() method to return the correct data. What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

..... Answer Area ExecuteReader public List<Entities.InboundQueue> GetExternalOrders() EntityConnection connection = ExecuteScalar SequentialAccess new EntityConnection ("name= m): KevInfo connection.Open(); ExternalOrders EntityCommand cmd = connection.CreateCommand (); cmd.CommandText = @"select g.OrderNum, g.VendorId, ExternalOrdersEntities g.FilePath, g.OrderValue .InboundQueues as g"; EntityDataRoader rdr = DIUS VCE To PDF - Free Practice Exam cmd. (CommandBehavior. List<InboundQueue> queueItems = new List<InboundQueue>(); while (rdr.Read ()) InboundQueue gueueItem = new InboundQueue(); queueItem.OrderNum = Convert.ToInt32(rdr["OrderNum"]); queueItem.VendorId = Convert.ToInt32(rdr["VendorId"]); queueItem.FilePath = rdr["FilePath"].ToString(); queueItem.OrderValue = Convert.ToDecimal(rdr["OrderValue"]); queueItems.Add(queueItem); rdr.Close (); connection.Close (): return queueItems;

A.	ExternalOrdersEntities	ExternalOrdersEntities	ExecuteScalar	SequentialAccess
B.	ExternalOrdersEntities	ExternalOrders	ExecuteReader	SequentialAccess
C.	ExternalOrdersEntities	ExternalOrdersEntities	ExecuteReader	SequentialAccess
D.	ExternalOrdersEntities	ExternalOrdersEntities	ExecuteReader	KeyInfo

Correct Answer: C Section: (none) Explanation

**Explanation/Reference:** 

### **QUESTION 11**

The GetExternalOrder() method in the ExternalQueueService service is throwing a runtime error. The method must query the database for a record that matches the orderNum parameter passed to the method. You need to modify the queryString string to retrieve the record. With which code segment should you replace line EQ64?

```
CEDUS

C A string queryString = @"SELECT_cq.OrderNum,p.g.VendorId, q.FilePath, q.OrderValue FROM ExternalOrdersEntities.InboundQueues AS q WHERE q.OrderNum = @orderNum";

C B. string queryString = @"SELECT * FROM ExternalOrdersEntities.InboundQueues WHERE OrderNum = @orderNum";

C C. string queryString = @"SELECT VALUE q FROM ExternalOrdersEntities.InboundQueues AS q WHERE q.OrderNum = @orderNum";

C D. string queryString = @"SELECT VALUE FROM ExternalOrdersEntities.InboundQueues WHERE OrderNum = @orderNum";
```

- A. Option A
- B. Option B
- C. Option C

D. Option D

Correct Answer: C Section: (none) Explanation

### **Explanation/Reference:**

### **QUESTION 12**

You need to regenerate the service proxies to include task-based asynchronous method signatures. Which command should you use?

- A. aspnet\_regiis.exe /t:code http://localhost:62965/UploadCallbackService.svc
- B. svcutil.exe /t:code http://localhost:62965/UploadCallbackService.svc
- C. aspnet\_compiler.exe /t:code http://localhost:62965/UploadCallbackService.svc
- D. aspnet\_regiis.exe /t:code http://localhost:62965/UploadService.svc
- E. svcutil.exe /t:code http://localhost:62965/UploadService.svc

Correct Answer: B Section: (none) Explanation

**Explanation/Reference:** 

### **QUESTION 13**

The DeleteExternalOrder() method in the ExternalQueueService service is not throwing a FaultException exception as defined by the FaultContractAttribute attribute in the IExternatQueueService.cs file. You need to throw the FaultException exception. Which code segment can you insert at line EQ45 to achieve this goal? (Each correct answer presents a complete solution. Chose all that apply.)

- C A string queryString = @"SELECT q.OrderNum, q.VendorId, q.FilePath, q.OrderValue FROM ExternalOrdersEntities.InboundQueues AS q WHERE q.OrderNum = @orderNum";
- C B. string queryString = @"SELECT \* FROM ExternalOrdersEntities.InboundQueues WHERE OrderNum = @orderNum";
- C. string queryString = @"SELECT VALUE q FROM ExternalOrdersEntities.InboundQueues AS q WHERE q.OrderNum = @orderNum";
- C D. string queryString = @"SELECT VALUE FROM ExternalOrdersEntities.InboundQueues WHERE OrderNum = @orderNum";
- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: C Section: (none) Explanation

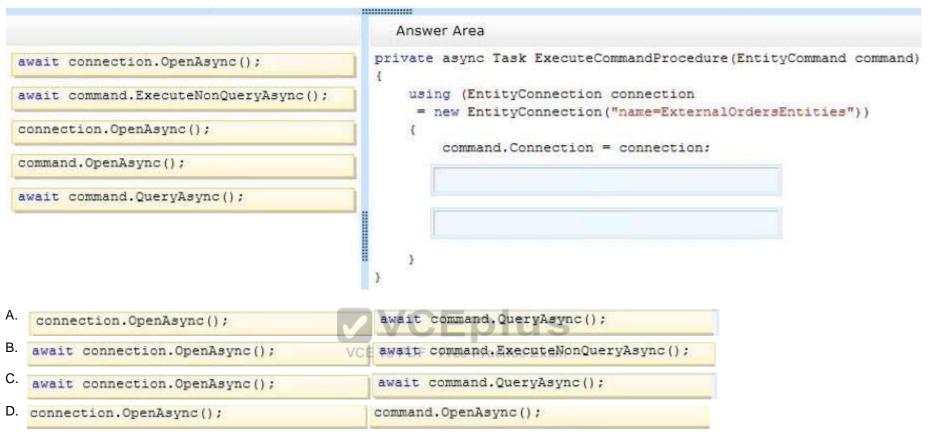

**Explanation/Reference:** 

## **QUESTION 14**

DRAG DROP

You need to modify the ExecuteCommandProcedure() method to meet the technical requirements. Which code segment should you use?

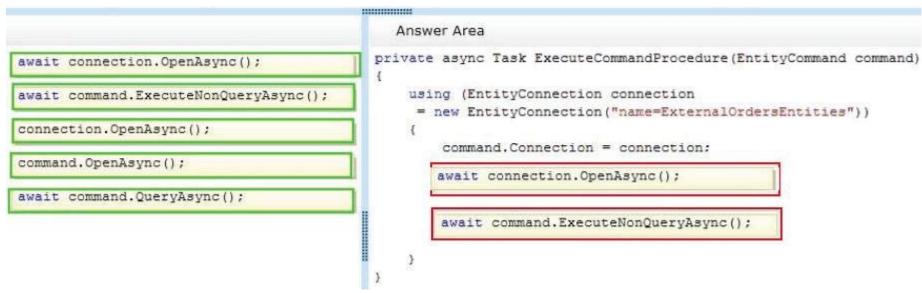

Correct Answer: B Section: (none) Explanation

**Explanation/Reference:** 

### **QUESTION 15**

The GetVendors() action in the ProcessedOrderController controller is querying the database each time it is run. The GetVendors() action must query the database only if the cache is null.

You need to add code to the action at line PC33 to cache the data. Which code segment can you use? (Each correct answer presents a complete solution. Choose all that apply.)

- A. cache.Set(new CacheItem("vendorKey", vendors), GetVendorPolicy());
- B. cache.Add("vendors", vendors, new CacheItemPolicy());
- C. cache.Add(new Cacheltem("vendorKey", vendors), GetVendorPolicy());
- D. cache.AddOrGetExisting("vendorKey", context, new CacheItemPolicy());

Correct Answer: AC Section: (none) Explanation

Explanation/Reference:

### **QUESTION 16**

The QueueDetail entity type must inherit from the InboundQueue entity type in the ExternalQueue service project using table-per-type inheritance. You need to modify the entities in the designer. What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Remove the OrderNum property in InboundQueue.
- B. Remove the OrderNum property in QueueDetail.
- C. Set the QueueDetail BaseType to InboundQueue.
- D. Remove the association between the entities.
- E. Right-click the entities and validate the table mapping.
- F. Set the InboundQueue BaseType to QueueDetail.

Correct Answer: BCDE
